STOP PRESS! Dive Expo Day

It is with regret that New Zealand Underwater has had to postpone the Dive Expo that was to be held at the Parnell Baths in Auckland on the 28-29th November due to unforeseen logistical problems. With further consultation within the Dive Industry another date will be set in the future and be advertised for your involvement.

Lowrance StructureScan – Full Panoramic Imaging

The innovative StructureScan features a combination of SideScan and exclusive new DownScan Imaging technology. SideScan provides full-screen left and right side-viewing with extra-crisp detail of up to 146m either side of the boat, underwater coverage displaying structure and fish targets, as well as their imaging-scan shadows. The new DownScan Imaging feature allows submerged detail directly beneath the boat, providing a complete underwater picture in a screen format that is easy to interpret. Revolutionary on-screen display versatility, merging side and down sonar scans in split-screen to view wide-area surveys and highly-defined detail. This unique new tool can also compare DownScan Imaging with 2D sonar images to better distinguish fish from structure.

Pelaj Spearfishing Equipment

- Pelaj is an innovative Australian Spearfishing brand purpose built to hunt big fish.
- Pelaj = gear for pelagics
- Pelaj was started in 2004 by spearfishermen frustrated by the lack of suitable gear to hunt big fish. With extensive research and development carried out by some of the world's foremost spearfishermen and 3 years of intensive design, the Pelaj railgun was released in November 2007.
- Pelaj is short for Pelagic – a term used to describe fast powerful migratory ocean dwelling fish, and is now widely available in New Zealand.
- www.pelaj.co.nz for more information.

Not all LEDs are created equal. The Ikelite difference.

Sophisticated circuitry and heat sink technology to ensure they stay bright throughout their lifetime. Other lower cost torches run unregulated, reducing overall light output and the lifespan of the LED.

Stop replacing bulbs. Highly efficient drivers yield a LED lifespan of 50 - 100 times the life of standard incandescent lamps. Bulb replacement is virtually obsolete. Save money on batteries. These torches burn 2.5 - 3 times longer on a set of batteries than their halogen counterparts. Get a clear view. A specially designed lens forms a powerful penetrating spot beam. PC, PCa, and PCm LEDs run cool so can be used for extended periods above water. Available at your local dive store.
